

Two number sum

Description :

There will t test cases. For each test case two integer will be given and you have to print sum of them.

Constraint :

All numbers will be positive integer.

Input :

first-line contains t - test-cases

next t lines will contain a, b two integers

Output :

t lines, each line contains single integer which represents sum of two numbers.

Example :

Input:

```
5
23 51
3 53
243 6345
234 435
26 46
```

Output:

```
74
56
6588
669
72
```
